

Alor - Ampera

Kalabahi Bay · surveyed 2026-07-31

© coralreefdiagnostics.com

Coral Health Index: TBD

What was done. No coral-cover figure is published for this site. No coral cover estimate: night dive. The written account of the site is a review of its photographs, not a second survey.

HARD CORAL COVER
not reported

No coral cover estimate: night dive.

TODAY'S HEAT LOAD
27.0°C **0.0°C-weeks**
16 Sep 2026 · -2.1°C vs the annual mean (29.1 °C)
· NOAA No heat stress

HEAT STRESS (5-YR MEAN ANNUAL MAX. DHW)
6.3°C-weeks
NOAA annual peaks averaging 4–8 °C-weeks

MAX. DEPTH
27.1 m

WATER TEMP. (SURVEY)
25.5°C
-3.1°C vs the 12 months to 2026-08 mean sea temperature (28.6°C)

PHOTOGRAPHS
51
on file for this site

POSITION
-8.2730, 124.4124
This site is just off the town of Ampera.

A night muck dive over black volcanic sand and rubble in Alor, defined by macro life rather than coral: tube anemones with crowns of more than 100 fine tentacles, frilled disc anemones, a whip coral, and a giant clam mantle. No coral-cover figure is published, as the site has almost no reef framework.

Bahasa Indonesia. Penyelaman muck malam hari di atas pasir dan pecahan karang vulkanik hitam di Alor, yang dicirikan oleh kehidupan makro alih-alih karang: anemon tabung dengan mahkota lebih dari 100 tentakel halus, anemon cakram berumbai, sebatang karang cambuk, dan mantel kima raksasa. Tidak ada angka tutupan karang yang diterbitkan, karena lokasi ini nyaris tidak memiliki kerangka terumbu. *Terjemahan ringkasan ini oleh AI; versi bahasa Inggris yang berlaku.*
