POSITION

-8.4850, 124.1950

A muck and jetty site in Alor rather than a coral reef: the night dive over gravel turned up sun corals, commensal shrimp, a mantis shrimp, a small octopus, and a dwarf lionfish, while the day dive under the jetty found pilings sheathed in sponges and pink gorgonian fans. Three seahorses in olive, rust, and yellow were photographed.

Bahasa Indonesia. Lokasi muck dan dermaga di Alor, bukan terumbu karang: penyelaman malam di atas kerikil memunculkan karang matahari, udang komensal, udang mantis, gurita kecil, dan ikan lepu kerdil, sementara penyelaman siang di bawah dermaga menemukan tiang-tiang terbungkus spons dan kipas gorgonia merah muda. Tiga ekor kuda laut berwarna zaitun, karat, dan kuning terfoto. *Terjemahan ringkasan ini oleh AI; versi bahasa Inggris yang berlaku.*

Photographs: Anderson Mayfield/Coral Reef Diagnostics — 3 of 54 on file; watermarked · Full site record: <https://api.coralreefdiagnostics.com/site-pages/alor-beang-abang-baeng-beach-baeng-jetty.html> · Heat stress is the mean of the latest five annual maxima of NOAA Coral Reef Watch degree-heating weeks for this reef's NOAA CRW virtual station (East Nusa Tenggara) — a five-year heat history for the station's waters, not a measurement at this site on the dive date.
