

# Alor - Goa Wolang (Walang Cave)

West Alor · surveyed 2026-07-30

**Coral Health Index: TBD**

**What was done.** No diver transect was run at this site. The figure is a blind Claude computer-vision point classification of 28 photographs by the author, read without sight of any other method's result; other computer-vision methods are compared on the site page. The written account of the site is a review of its photographs, not a second survey.

HARD CORAL COVER

**7.7%**

POSITION

**-8.3583, 124.3684**

An Alor dive in three parts: a shaded overhang crusted in magenta coralline algae and hung with orange soft corals, a cave whose torch-lit interior holds only sponges and a solitary cup coral, and a broad pavement of coralline-crusted rubble with scattered live coral heads. The short photo set makes this more a record of the cave than of the reef.

**Bahasa Indonesia.** Penyelaman Alor dalam tiga bagian: ceruk teduh yang berkerak alga koralin magenta dan bergantung karang lunak jingga, sebuah gua yang bagian dalamnya — disinari senter — hanya berisi spons dan satu karang cangkir soliter, serta hamparan luas pecahan karang berkerak koralin dengan koloni karang hidup yang tersebar. Kumpulan foto yang singkat ini lebih merupakan catatan tentang guanya daripada tentang terumbunya. *Terjemahan ringkasan ini oleh AI; versi bahasa Inggris yang berlaku.*
