POSITION

-8.2693, 124.4205

A night muck dive near Kalabahi over a silty, sandy slope where the stars are invertebrates rather than coral: many anemones, including one photographed holding a small crab among its tentacles, a frogfish, and an electric-blue mushroom coral. Hard coral was sparse, so no cover figure is given.

Bahasa Indonesia. Penyelaman muck malam hari dekat Kalabahi di atas lereng berlumpur dan berpasir, tempat bintang utamanya adalah avertebrata alih-alih karang: banyak anemon, termasuk satu yang terfoto sedang memegang kepiting kecil di antara tentakelnya, seekor ikan kodok, dan karang jamur berwarna biru listrik. Karang keras sangat jarang, sehingga tidak ada angka tutupan yang diberikan.
