

Chagos Archipelago - Great Chagos Bank West (BITB39)

South Brother · surveyed 2015-03-21

Coral Health Index: TBD

What was done. Coral cover here was measured on in-situ benthic transects run by divers on the [Living Oceans Foundation Global Reef Expedition](#) — a diver measurement, not an estimate read off photographs. The written account of the site is a review of its photographs, not a second survey.

A forereef off South Brother in the Three Brothers group with 50% coral cover and 34 coral genera, among the highest diversity in Chagos, including the endemic brain coral *Ctenella*. The shallows are a zone of massive *Porites* with *Acropora* dominating below, and fish are the standout: fusilier and baitfish schools, bluefin trevally, a moray, and a giant clam. Surveyed on the [Living Oceans Foundation's Global Reef Expedition](#).
