

Chagos Archipelago - Great Chagos Bank West (BITB41)

Three Brothers · surveyed 2015-03-22

Coral Health Index: TBD

What was done. Coral cover here was measured on in-situ benthic transects run by divers on the [Living Oceans Foundation Global Reef Expedition](#) — a diver measurement, not an estimate read off photographs. The written account of the site is a review of its photographs, not a second survey.

A bank reef outside the Three Brothers lagoon dominated by *Porites*, with *Acropora* unusually scarce, over ground of bare rock and sponges rather than the usual coralline pavement. Cover is patchy (28-73% between transects), and some colonies show real but scattered paling. Surveyed on the [Living Oceans Foundation's Global Reef Expedition](#).
