

Chagos Archipelago - Great Chagos Bank West (BITB55)

South Brother · surveyed 2015-03-26

Coral Health Index: TBD

What was done. Coral cover here was measured on in-situ benthic transects run by divers on the [Living Oceans Foundation Global Reef Expedition](#) — a diver measurement, not an estimate read off photographs. The written account of the site is a review of its photographs, not a second survey.

A coral-rich forereef off South Brother (48% cover) where tabular and corymbose *Acropora* in the shallows give way to a near-monoculture of massive *Porites* at depth. The reef looks well pigmented, though a small crown-of-thorns starfish was spotted, along with a resident octopus. Surveyed on the [Living Oceans Foundation's Global Reef Expedition](#).
