

Chagos Archipelago - Salomons Island (BISA105)

Salomon · surveyed 2015-04-29

Coral Health Index: TBD

What was done. Coral cover here was measured on in-situ benthic transects run by divers on the [Living Oceans Foundation Global Reef Expedition](#) — a diver measurement, not an estimate read off photographs. The written account of the site is a review of its photographs, not a second survey.

A high-cover (50.3%), high-diversity lagoon patch reef that is emphatically not an *Acropora* reef: *Porites*, the fleshy *Lobophyllia*, and the long-polyped *Goniopora* make up two-thirds of the coral, each taking the lead at a different depth. Surveyed on the [Living Oceans Foundation's Global Reef Expedition](#).
