

Chagos Archipelago - Salomons Island (BISA106)

Salomon · surveyed 2015-04-29

What was done. Coral cover here was measured on in-situ benthic transects run by divers on the [Living Oceans Foundation Global Reef Expedition](#) — a diver measurement, not an estimate read off photographs. The written account of the site is a review of its photographs, not a second survey.

HARD CORAL COVER

46%

Benthic surveys

TODAY'S HEAT LOAD

28.9°C **0.0°C-weeks**

16 Sep 2026 · -0.1°C vs the annual mean (29.0 °C)

POSITION

-5.3442, 72.2039

A sheltered forereef outside Salomon lagoon at about 20 m with a steady 46% coral cover and 28 genera: *Acropora* in the shallows, a *Porites* core through the middle depths, and plate-forming *Pachyseris* at the bottom. No one dived it with a camera, so its condition is unknown. Surveyed on the [Living Oceans Foundation's Global Reef Expedition](#).

Full site record: <https://api.coralreefdiagnostics.com/site-pages/gre-chagos-archipelago-salomons-island-bisa106.html> · Heat stress is the mean of the latest five annual maxima of [NOAA Coral Reef Watch](#) degree-heating weeks for this reef's [NOAA CRW](#) virtual station (Chagos) — a five-year heat history for the station's waters, not a measurement at this site on the dive date.
