

Chagos Archipelago - Salomons Island (BISA84)

Salomon · surveyed 2015-04-22

Coral Health Index: TBD

What was done. Coral cover here was measured on in-situ benthic transects run by divers on the [Living Oceans Foundation Global Reef Expedition](#) — a diver measurement, not an estimate read off photographs. The written account of the site is a review of its photographs, not a second survey.

A windward forereef outside Salomon atoll at 30 m with 49% coral cover, dominated by *Acropora* tables and branching colonies with *Porites* taking over at depth. It carries the highest bleaching value in the published Chagos table (34%), and photos show uniformly white branching colonies beside pigmented neighbors. Surveyed on the [Living Oceans Foundation's Global Reef Expedition](#).
