

Chagos Archipelago - Speakers Bank (BISP95)

Speaker's Bank · surveyed 2015-04-26

Coral Health Index: TBD

What was done. Coral cover here was measured on in-situ benthic transects run by divers on the [Living Oceans Foundation Global Reef Expedition](#) — a diver measurement, not an estimate read off photographs. The written account of the site is a review of its photographs, not a second survey.

A high-cover lagoon patch reef (56.9% coral, mostly *Acropora* tables) that stands out for its patchwork: table coral gives way to open rubble and then a broad meadow of ribbon-like, seagrass-type plants seen at no other site in its batch. Surveyed on the [Living Oceans Foundation's Global Reef Expedition](#).
