

N. GBR - Blue (AU122138)

N. GBR · surveyed 2014-09-27

What was done. Coral cover here was measured on in-situ benthic transects run by divers on the [Living Oceans Foundation Global Reef Expedition](#) — a diver measurement, not an estimate read off photographs.

HARD CORAL COVER

57%

Benthic transects+photo-quadrats

TODAY'S HEAT LOAD

25.2°C **0.0°C-weeks**

exact

A [Global Reef Expedition](#) station on Unnamed Reef 122 in the far northern Great Barrier Reef, surveyed on 27 September 2014, where the benthic transects recorded 57% live coral cover. Anderson did not dive this station, so his field notes do not describe it. Surveyed on the [Living Oceans Foundation's Global Reef Expedition](#).

Full site record: <https://api.coralreefdiagnostics.com/site-pages/gre-n-gbr-blue-au122138.html> · Heat stress is the mean of the latest five annual maxima of NOAA Coral Reef Watch degree-heating weeks for this reef's [NOAA CRW](#) virtual station (Far Northern GBR) — a five-year heat history for the station's waters, not a measurement at this site on the dive date.
