

N. GBR - Green (AULK20)

N. GBR · surveyed 2014-09-06

What was done. Coral cover here was measured on in-situ benthic transects run by divers on the [Living Oceans Foundation Global Reef Expedition](#) — a diver measurement, not an estimate read off photographs.

HARD CORAL COVER
51%
Benthic transects+photo-quadrats

TODAY'S HEAT LOAD
24.8°C **0.0°C-weeks**
3 Oct 2026 · -2.7°C vs the annual mean (27.4 °C) ·

A [Global Reef Expedition](#) station on Lark Reef in the northern Great Barrier Reef, surveyed on 6 September 2014, where the benthic transects recorded 51% live coral cover. Anderson did not dive this station, so his field notes do not describe it. Surveyed on the [Living Oceans Foundation's Global Reef Expedition](#).

Full site record: <https://api.coralreefdiagnostics.com/site-pages/gre-n-ghr-green-aulk20.html> · Heat stress is the mean of the latest five annual maxima of [NOAA Coral Reef Watch](#) degree-heating weeks for this reef's [NOAA CRW](#) virtual station (Northern GBR) — a five-year heat history for the station's waters, not a measurement at this site on the dive date.
