

N. GBR - Pink (AUPS67)

N. GBR · surveyed 2014-09-14

Coral Health Index: TBD

What was done. Coral cover here was measured on in-situ benthic transects run by divers on the [Living Oceans Foundation Global Reef Expedition](#) — a diver measurement, not an estimate read off photographs. The written account of the site is a review of its photographs and of the author's dive notes, not a second survey.

POSITION

-11.4604, 143.1227

exact

A silty inshore flank of Parkinson Reef whose coral is concentrated in the 4-7 m band, over 50% live cover of *Isopora*, *Diploastrea*, and *Pocillopora*, above deeper *Pachyseris* plates and sand. The headline was a giant clam some 1.5 m across, while two photographs show white coral (bleached or freshly dead) that his notes do not mention. Surveyed on the [Living Oceans Foundation's Global Reef Expedition](#).

Photographs: Anderson Mayfield/Coral Reef Diagnostics — 3 on this card; 30 in the gallery · 54 on file; watermarked · Full site record: <https://api.coralreefdiagnostics.com/site-pages/gre-n-GBR-pink-aups67.html> · Heat stress is the mean of the latest five annual maxima of [NOAA Coral Reef Watch](#) degree-heating weeks for this reef's [NOAA CRW](#) virtual station (Far Northern GBR) — a five-year heat history for the station's waters, not a measurement at this site on the dive date.
