Approximate position: no GPS fix was logged for this dive.

A night macro dive under a Ternate jetty, its pilings carrying a dense filter-feeder community - cup corals, anemones, sponges - rather than reef framework. Highlights include banded snake eels, nudibranchs, and a cleaner shrimp; the low, scattered coral here reflects the jetty-and-sand habitat, not degradation.

Bahasa Indonesia. Penyelaman makro malam hari di bawah dermaga Ternate, tiang-tiangnya menampung komunitas penyaring makanan yang rapat — karang cangkir, anemon, spons — alih-alih kerangka terumbu. Sorotannya mencakup belut ular belang, nudibranch, dan udang pembersih; karang yang rendah dan tersebar di sini mencerminkan habitat dermaga dan pasir, bukan degradasi. *Terjemahan ringkasan ini oleh AI; versi bahasa Inggris yang berlaku.*
