A night dive at Nando Point that Anderson noted would have been a beautiful reef dive by day - tons of hard coral - though the usual nocturnal critter parade didn't show, and the photographs are mostly polyp and invertebrate close-ups.

Bahasa Indonesia. Nando Point di Taman Nasional Komodo, diselami sebagai penyelaman malam pada 19 Januari 2019 dari 18:52 hingga 19:37, kedalaman maksimum 19.2 m pada 25.6°C — catatan Anderson sendiri menyebutkan bahwa lokasi ini pasti akan menjadi penyelaman terumbu yang indah pada siang hari, dengan "karang keras yang melimpah", tetapi merupakan penyelaman malam yang tidak biasa karena parade biota nokturnal yang lazim tidak muncul... *Terjemahan ringkasan ini oleh AI; versi bahasa Inggris yang berlaku.*
