POSITION

3.7500, 72.8300

Approximate position.

Ari Atoll has no photographs or cover figure attached to this site. The nearest regional context is a 1997 Reef Check record (44% hard coral, 6.63 km off) that predates both the 1998 and 2016 Maldives mass-bleaching events, so it cannot describe the reef's current condition.
