Approximate position.

A pin at the northern end of Ari Atoll with no photographs or survey of its own. Nearby Reef Check records from 2006-2025 average about 23% coral cover and include some very low stations in single digits, with the 2016 mass bleaching falling inside that window.

Full site record: https://api.coralreefdiagnostics.com/site-pages/maldives-north-ari-atoll.html · Heat stress is the mean of the latest five annual maxima of NOAA Coral Reef Watch degree-heating weeks for this reef's NOAA CRW virtual station (Maldives) — a five-year heat history for the station's waters, not a measurement at this site on the dive date.
